

4 x 13" CHROME WIRE WHEEL MIDGET

Original factory option chrome wire wheel in original Midget and Sprite wheel size, ready to take standard size 145-13 tyres. Some larger, low profile tyres may alternatively be fitted, but this is conditional on body style (round or square wheel arch) and suspension height on your particular car (if in doubt, please contact MGOC Spares, where one of our technicians would be happy to advise you).

The 4 x 13" chrome wire wheel is made by a former division of the MG original equipment wire wheel manufacturer, using original tooling, guaranteeing the best possible quality and match to the original item. The wheel is finished in top quality chromium plating for durability and depth of lustre.

The authentic Midget and Sprite wire wheel, totally correct for your car whether you are simply replacing your old wheels or converting your car from steel wheels. And you know nothing looks better than an MG on wire wheels in the summer sunshine!

Easy to fit. Tyres may be fitted and balanced by a reputable tyre specialist, or by the Club (enquire for details). Fitting the wheels to the car is simple enough, but do not over or undertighten the spinners. Also remember to ensure the splined hubs on the car and the splines on your new wheels are correctly lubricated before fitting.

Basic hand tools required. If your car has always had wire wheels, you will no doubt be acquainted with the hammer required for the spinners already (along with the special adaptor spanner if you have octagonal spinners). You might consider one of the spinner removers recommended below, which enable easier spinner removal and fitment and inflict less damage to the spinners in the long term.
