

## EXHAUST JOINTING PASTE

Autogem GTP1 exhaust jointing paste is specially formulated for the assembly of all exhaust systems. Its joint lubricating properties ensure easy and simple assembly of a new exhaust system and it self-seals each joint as the exhaust is fitted, preventing leakage of harmful and unpleasant fumes.

Additionally, exhaust jointing paste hardens with heat as the new exhaust is used, providing a gas-tight seal wherever it is applied. Withstanding temperatures of up to 1000°C, it is asbestos-free and is supplied in a 140g tube.

When you've finished fitting the car exhaust, keep any left-over of this handy consumable in the garage - not only does it seal exhausts, but it works equally effectively on domestic flues and boiler pipes too!

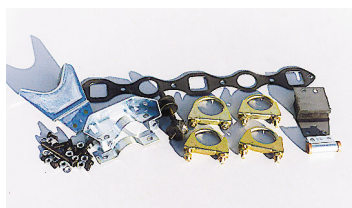

*Easy to fit.* Apply jointing paste around all necessary exhaust sockets, pipes and clamps, fit the system together and tighten up the joints and mountings. The heat of the exhaust will harden the jointing paste to give a permanent gas-tight seal.

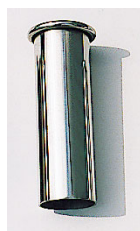

*No tools required.*
