

WIRE WHEEL CLEANING BRUSH

Amazing how it's so often the case that the simplest devices and inventions are the most effective. That's certainly the case with the wire wheel cleaning brush. Without question, every proud owner of an MG on wire wheels should have one.

When you're washing your car, don't you always leave the wire wheels to last, because cleaning them is such a tedious task? And how often then do you just give them a cursory wipe over because you'd rather spend the next two hours doing something more interesting? Inevitably the lack of careful cleaning allows the build-up of road dirt, including harmful salts, trapping moisture and accelerating corrosion that quickly makes wire wheels look tatty and unloved.

The wire wheel cleaning brush gives you the best of both worlds - clean and well cared for wire wheels without having to set aside half a day to do the job. Brilliant and simple.

Easy to use. Doesn't need explaining, does it?

No other tools required.
