

2 EARED STEEL SPINNER REMOVER

Another one of those great yet simple ideas, this steel spinner remover is appropriate for all wire wheel MGs fitted with 2 eared spinners.

The 2 eared steel spinner remover features a long handle, enabling far easier spinner removal and replacement. It guards against accidental over or undertightening of the spinners on your MG, since the length of the handle is designed to provide the correct leverage when used by hand - it's often difficult to judge whether a spinner is tightened up correctly when you're knocking seven bells out of it in the rain with the tool kit hammer.

Banishing the hammer from wheel changing to occasional use on sticking electric fuel pumps also means the usual flaking chrome and bruise damage inflicted on the spinners each time you change a wheel becomes negligible - that's a good enough reason to use a steel spinner remover on its own!

Easy to use. Couldn't be easier.

No other tools required.
