

RENOVO PLASTIC REAR SCREEN POLISH

For convertible cars every time the soft-top is folded microscopic scratches are formed on the window's plastic rear screen which causes the window to look cloudy, discolour and become difficult to see through.

Renovo Plastic Rear Screen Polish restores transparency, removes cloudiness and yellowing and reduces scratches and staining (it will not remove clarity defects that are within the plastic). It cleans and conditions in minutes - just polish it on and polish it off. Available in 50ml or 100ml bottles.

Also great for plastic headlight lenses (owners of modern MGs take note!) and crash helmet visors. More unusual but equally effective applications include plastic garden furniture, perspex aviation canopies and boat portholes. A very effective multi-use product. Keep some on your garage shelf!

Easy to use. Ensure window is clean and free from dust by washing with soft cloth and warm water (do not use detergent). Apply small quantities using a soft cotton cloth with a little pressure and circular movements to rub well in. Use more pressure on areas which are more scratched. Allow to dry, then use a clean soft cloth to remove coating of polish. Use on outside and inside of window for best results.

Basic hand tools required. Two soft cotton cloths or dusters, one to apply and the other to polish off.
