

## MGB & MIDGET HARDTOP STORAGE BAG

Durable and secure storage bag to protect a standard size (i.e. Works or Wrap Around style) MGB or Midget hardtop from accidental workshop/garage damage and ingress of dust and dirt during those (hopefully) long and warm summer months when hardtops are not required.

A hardtop is a very practical option, providing you with extra comfort during cold winter months in combination with improved security. When it's removed from the car, however, it becomes a very large item potentially taking up a great deal of space in your garage and getting into harm's way too easily, unless you store it correctly.

When storing a hardtop do not leave it resting on the ground in the same position as if it were fitted to the car because the sides can easily distort and spread. To store your hardtop safely, either rest it against a wall balancing on its rear edge (the one below the back window), or make up a sling and hoist it up into the roof of your garage.

*Easy to fit.* With help from a colleague (two make it even easier) the storage bag can be slipped around the hardtop and the flaps buckled up, prior to siting the hardtop in your preferred safe storage place..

*No tools required.*
