

## TRIM SCREW & WASHER SET MGA, MGB & MIDGET

Bright (chrome) finish self tapping screw and cup washer set, containing sufficient original style screws and washers to fit a trim kit in an MGA, MGB roadster, Midget or Sprite.

Also available in black finish for MGAs, MGB roadsters, Midgets and Sprites, plus larger quantity set in black for MGB GTs (please contact MGOC Spares for details).

*Easy to fit.* Always retain your old trim panels to use as templates for screw holes in the new panels - that way you'll be sure to have the screw holes in the right places and avoid having to drill new holes in the car body. Pierce the new trim panels with a bradawl - don't use a hand or power drill, because the drill bit will 'pick up' the foam padding inside the trim panel and wind it into an unsightly bulge.

*Basic hand tools required.* Bradawl to pierce holes in new trim panels, plus a crosshead screwdriver for the screws.
