

SEAT FOAM BASE MIDGET 1970-79

Exact reproduction of the original seat foam base (cushion) as used in seats in Midgets and Sprites built between 1970 and 1979, incorporating the distinctive under-knee bolster profile of those seats.

Unlike MGB seat foam bases, the Midget and Sprite seat foam base is not handed and will therefore fit either of the front seats.

An absolute must when reupholstering seats with new Club covers - tired, sagging old seat foams would simply not do them justice and would fail to offer the correct support for the seats' occupants. Additionally, new foams exactly match the profile of new seat covers, holding them smartly taut and making the job of seat reupholstery that much easier.

Moderate skills required. Seat cover centre panel needs to be attached to foam centre to get the right bolster contours - this requires patience and a bit of upholstery adhesive (for most of us) or stitching the centre panel to the foam (for the very confident). If you're put off, remember our exchange leather seat service, guaranteeing you the professional finish without the worry.

Basic hand tools required. Upholstery adhesive for attaching the seat cover centre panels to the foam base.
