

CARBON FIBRE GEAR LEVER SURROUND 1976-80

Designed to complement the Club carbon fibre dash and door cappings, the centre console in a 1976-80 MGB gets a real lift with this carbon fibre gear lever surround. Crafted to fit perfectly in the console, the panel is made from carbon fibre laminated weave through which light reflects, making the pattern appear alive beneath the surface. A polymer lacquer finish creates depth and sheen.

The carbon fibre gear lever surround panel fits original moulded plastic consoles but is also available ready-fitted in the Club's own design of one-piece leather trimmed console. Now that's an idea - why not take a look at the range of Club leather trimmed consoles, to complete that high-tech, ultimate sporting effect?

The carbon fibre console gear lever surround panel is a perfect accompaniment to the Club carbon fibre dash, door cappings and door pulls - also looks great with a Club Classic leather panel kit or a full leather interior upgrade.

Easy to fit. The carbon fibre panel is secured both by the gear lever ring (four screws - remember the short one goes in the front position), plus two screws provided for use in pre-drilled mounting holes (corresponding small holes will require drilling in the original console).

Basic hand tools required. The usual set of crosshead screwdrivers, plus a fine drill for the screw holes in the console.
