

## CLASSIC PERFORATED LEATHER HEATED SEAT OPTION

Having decided to lavish on your MG the treat of Classic Perforated leather reclining seats, MGOC Spares invites you to seriously consider the heated seat option before you place your order.

Heated squabs (backs) and cushions are now offered as a great option on these seats, completing the luxury feel - literally - and giving you the perfect excuse to take your MG for a spin when you're champing at the bit to do so on those crisp and cold but beautifully sunny days of Winter and early Spring (particularly snug driving home late at night with the hood down in the Summer, too).

The special low-energy heat pads operate on a trickle current, so you don't need to uprate your alternator or electrical system to run them. Heated seats are supplied complete with wiring looms and illuminated switches, plus easy-to-follow instructions for hassle-free DIY installation.

Add part number R066 to your Classic Perforated leather seat order for the heated seat option.

*Easy to fit.* Follow the simple wiring instructions supplied with the seats (click on 'Fitting Instructions' here to view). Fitting the switches in your chosen position may necessitate drilling, filing etc. to create the required rectangular holes.

[FITTING INSTRUCTIONS](#)

*Basic hand tools required.* Electrical terminal crimping tool or pliers to secure electrical connectors. Drill and files to create rectangular holes for switches in fascia or console (alternatively, if you don't wish to modify the fascia or console, you can purchase or make a simple accessory/auxiliary switch panel to mount under the fascia, or fit the switches in a Club MGB underdash panel).
