## BONNET SOUND PROOFING PAD MGC

Originally fitted to later 1970s MGBs and GTs, bonnet sound proofing is equally applicable and effective in the earlier MGC and MGC GT models. Sound proofing pads absorb a significant amount of engine noise and also reduce the drumming effect inherent in the large expanse of the bonnet panel - a great and very simple modification for cars not already fitted with them.

Accurately made from sealed sound proofing material die cut specifically for the MGC bonnet profile, the pad includes a self adhesive backing, making installation extremely quick and easy - fitment takes a matter of minutes.

The bonnet sound proofing pad will fit all MGCs and MGC GTs.

*Easy to fit.* Simply remove backing from self adhesive side and apply to underside of bonnet, smoothing out trapped air bubbles as you go. If engine fume residue or greasy patches are present on the bonnet, these will need cleaning off before pad fitment to ensure maximum effectiveness of the adhesive. The area covered by the MGC pad is a big one - make sure the pad is absolutely straight as you begin.

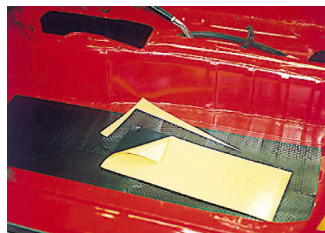

*No tools required.*
