

CLASSIC PANEL SET MIDGET & SPRITE 1970 ON

Enduring and popular 1970s 'heat-welded' MG factory style trim panel set returns the sparkle to the jaded interior of any Leyland-era Midget or Sprite. Will also fit 1968-69 cars without modification, opening up interior colour choices not available in original style panel sets for those years.

Thirteen piece comprehensive panel set includes pair of door panels, pair of outer footwell sides, pair of inner footwell sides, choice of high or low tunnel panel, pair of sill panels, pair of rear quarter panels and rear cockpit panel. Available in a wide choice of nine colours, including four eye-catching new colours with which to personalise your car.

Also included in the Classic panel set is sufficient matching vinyl to use on 'B' posts, door cappings, fascia crash rail and behind the joints between the inner footwell panels and the tunnel panel - everything you need to complete an immaculate, plush new interior for your Midget or Sprite.

Moderate skills required. Clips and pop rivets used on rear cockpit and door panels. Screws and cup washers used on other panels. Material for 'B' posts, cappings, etc. fitted with adhesive - patience is required to get these looking right.

FITTING INSTRUCTIONS

Basic hand tools required. Cross-head screw driver set, pop rivet gun plus bradawl to pierce screw holes in panels. Small hand drill required if new screw holes are required in body. A pair of upholstery pliers would be helpful in pulling glued vinyl taut over the crash rail and door cappings.
